

# Project: Task Manager

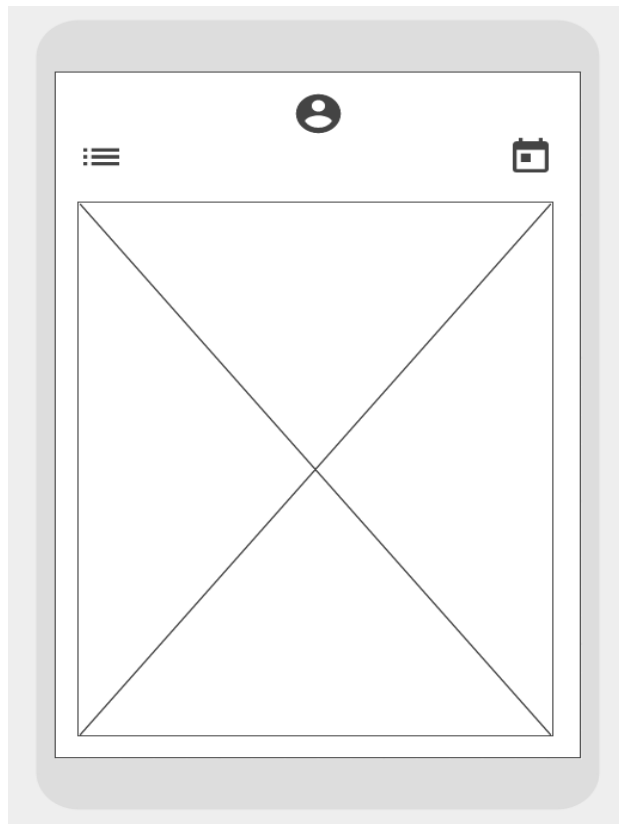

Tasks are sometimes hard to manage. People like to keep a list of things to do so they will not forget. The Task Manager app helps you create a list of things to do and manage them. Adding task will be quick and easy. Users will also be able to add events or activities. Users will also be able to set dates on each task that will help them be on track on the things that they need to do. The app will also be having a calendar which will be connected to the Google Calendar API. Users have the option to login so they can sync to all their devices.

## Features:

- As a user, I want to be able to create a task.
- As a user, I want to be able to set dates on when a task should be started and when it is due.
- As a user, I want to be able to look at the calendar and see what tasks I have for the day.
- As a user, I want to be able to login so I can create tasks.
- As a user, I want to be notified about my tasks.

## Tasks Page

## Adding A Task Page

A mobile app interface for adding a task. It features a close button (X) in the top left corner. Below it is a 'Title:' label followed by a text input field. Underneath is a 'Details:' label followed by a large text area. To the right of the details text area is a 'Set Date:' label with a calendar icon. At the bottom center is a 'Save' button.

## Calendar Page

A mobile app interface for a calendar page. It features a close button (X) in the top left corner. Below it is a header bar with the text 'February'. Underneath is a large empty rectangular area, likely for a calendar grid. The interface is surrounded by a blue border with small square handles at the corners and midpoints, indicating it is a design template.
